DIVING OPPRATIONS, HAVE DECREASED IN DANGER.-The large number of big salvage operations that have been carried out recently have allowlated inventive brains to try to make the work of the diver easier by perfectley old and in renting new applicates.

Perhaps the most wonderful of these appliances is the oxyneetyleno torch, which works as freely in water as it does on shore, cutting the steel plates of a slip's hall as easily as cutting through ciny,

Divers use Tils appliance to cut nway the rugged edges of the holes that may have been inode in the hull. After this has been done a timber patch is placed over the hole, and then the hold that has been flooded is pumped out, so that the ship may be made buoyant enough to rise to the surface.

To do this job the diver must have light. This is supplied by the powerful submarine torch, which sheds a brilliant light, and the diver is enabled to move about freely, whereas in the days of the old hand-lamp he had to be wary of his steps.

The difficulty of directing operations by the salvage engincers is overcome by the submarine photographic camera,

A large camera is enclosed in n stee, earling, which, by an arrangement, can be focused from the outside. Powerful electric tamps form a part of the comern's equipment, so that the oblect to be photographed may be illuminated.

With the aid of this camera clear photographs of the damage done to a ship can the taken under water, so that the salvage engineers are able to tell exactly what tools they require.

~~~

### How Measurements and

Distances Came About Natural mensurements of distances were originally taken from parts of the human body before there was any plan to form regular tables of means urement. The Inch. for Instance, developed from the exact length of the thumb Joint.

The old measurement called "the band" was the four lockes acrors t person's hand, and the hand measure silli is four inches. The sonn, nine Inches, came from the space from the end of the thumb to the end of the extended little finger. The foot, 12 inches, came, as its name significs, from

The cubit, an old measure of about 18 Inches, is the distance of the fore arm from the client to the end of the middle finger. The gard meant an arm's length from the chest, or a stride, being stid a simulard measure of 30 Inches or b teel. The fathom. O feet, was gauged by a man's height or by his reach with both arms. The word fathout as a terb, still means to reach or to get the death of a body of water. The league meant at first an hour's walk, so that low it means about three of our ordinary present

### How Logs Are Salvaged

Alinnessia tumbermen are realizing profils from the wasteful methods of their producessors in salvaging logs which long have been under the we ters of woodland takes to the old tim her districts, says l'opplar Mechanics Magazine, Millions of eighteen and twenty-foot cuts, entire ratts and oth er limbers to an excellent state of preservation have been pulled from the lakes with big cranes and cut Into boards. Much of the word is of operior quality and it does not warp like green timber. More than AMILIOO feel of iniches was taken from one lake that year and like quantities from others. Itemoral of the logs in also an aid to users of rances and motor boats.

How Bables "Navigate"

Cats and dors pace, by a crawling laby thats. This interesting in formation was recenily revealed in an experiment at Johns Hopkins unt terelly. The appealon, that bothered not only the experts but fond parents as well, was "what kind of galf do crawling bables usel? A cat. a dex and bables of various ages were used in the experiment. The telliale slow taction camera plainly showed that rate and dogs move in a paring gair while bables do a left, right troiling mellow.

### How to Silver Brass

There are numerous formulas for silveting brass erticles without the the of the electric current. A surveillag partie may be made by the sciries 10 parts silver pitrati to 32 parts polandom cranide in distilled water: mix, ally and filter, Moleton (00 parts whilles and 60) parts powdered tar THE WITH SHOUGH OF the Store to form a pasty meen, apply by a brach to the brace objects. Hinse of and dry ike atticles in samilasi.

How to Frest Glass Glass may be frested by the sine lear by Bret cleaning the glass and then applying a thin come of white lend whired with temperature. Three set that the set the place with a ind of characters, disposing to soil

close is the margin between food pro

duction and food consumption, and

how much more pressing the food

question is destined to grow in the

years of peace and racial expansion

The oceans literally teem with food.

The man who declared that humanity

Is a race of herring-catchers might

have overstated the case, but that the

sea abounds in food fishes and fishes

At for food is well known. As soon

as we begin to study the subject of

ecean fisheries, however, we come up

short against the fact that what we

really know about the inhabitants of

Another phase of oceanography that

will demand and receive close atten-

tion in the years to come is the ocean

currents. The effect of these great

rivers of the sea upon the welfare of

the human race is past imagination.

It is said that the Gulf stream carries

enough heat toward Europe every 21

hours to melt a mass of fron as large

Rear Admiral Pillsbury, describing

this remarkable river of the sen, says

that every hour there passes through

the straits of Florida the enormous

total of 00,000,000,000 tons of water,

carrying enough sait to load many

times over every ship that ealls the

main. Through these straits the

stream is 40 miles wide. It carries

more water than all the streams of

the world bring down from the land

In each of the four quarters of the

globe there is a wonderful circulatory

system-the heavy, cold waters of the

polar seas rushing equatorward, and

the light warm waters of trople

oceans sweeping back, giving a huge

swirl not unlike the motion of water

driven around the bottom of a basin

neer on the bosom of the Jopan cur-

rent. Certain it is that all of these

vant rivers of the occan have played

an localculably important role in the

affairs of the human race, and that a

more exhaustive aigdy of them than

has been made holds many revelations

One of the questions that is often

arked is whether a ship, slaking in

deep water, goes to the bottom, or

vertical depth zone and drifts on for-

ever. This question sprang into great

prominence when the Thank went

down, and was asked frequently dur-

ing the World war. The answer is,

she goes directly to the bottom, else

how could a dredge or a travel be

One of the alrange things that hap-

ten when ships sink is that implosions

occur. These are inward burnlings,

often with a force as ifemendous as

the outward bursting caused by ex-

plesions of gunpowder. As the ship

sinks into deep water, air chambers

that do not fill up are burst inward

with a force proportionate to their

resistance. If there be corked boitles

in the stores that are not entirely full,

the corks are driven in or the bottles

With what force these implesions

occur may be gathered from an expan

tience of a scientific expedition. A

thermometer was let down into very

deep water, wiapped in protecting

cloth. When the line was drawn by

the sea is startlingly limited.

as Mount Washington.

that He abend.

(Prepared by the National Geographic Boristy, Washington, D. C.)

A LITHOUGH it may be true that the principal ship lanes of the ocean are almost as definitely traveled and marked as a Lincoln highway or a Long Island boulerard, our knowledge of the bounding main is only fragmentary.

To begin with, the area of the sea is about three times as large as that of the land. Although as long ago as 1904 the governments of the civilized world had get together some 25,000,000 observations of every kind and sort from the logs of merchantmen, warz thing, and government vessels, and although the results of a single expedition have filled over 50 massive quarto volumes, what we know about the sen is but the primer of the things it has

The most impressive thing about the sea la lla shallowness as compared with the size of the earth, and its depth as compared with the lisisht of the land. If you were to take k globe six feet in diameter and excavate the deepest trench of the ocean thereon. it would be a bare oin scratch deepabout one-twentieth of an Inch. And yet so profound are the depths of the ren that the bulk of the water in it is 15 times as great as the bulk of the land that rises above its waves. In its deepest trench the tallest moontain on the face of the globe could be buried and ships could still pass over the spot with & built rille of water under them.

The average depth of the ocean is more than two miles-about 12,480 feet, the oceanographers estimate. On the other band, the average height of the land is less than half a mileabout 2,250 feet. How much further beneath the waves the sea bottom fles than the land crest above them is shown by the fact that while only 1 per cent of the land rises to an altiinde of 12,000 feet, 46 per cent of the ocean's floor lies under more than 12,-Och feet of water.

The relative height of the land surface and the sca bottom is about in keeping with their relative areas, there being 71 neres occupied by the sea for every 20 held by the land. If It were possible to drain off the upper 10,000 feet of the waters of the ceaand to lay have the floor that lies under It, the territory thus recovered, added to the land now above the sea. would give only a titty-lifty division between land and water.

### Groad Continental Shelf.

The ereans as we know them are larger than the true ocean basis. As a monument is always planted on a base, so the confidents have broad undersea bases upon which to rest. To the occanographers there is a line known as the 169 fathom line, which largely parallels the shore line, but which is sometimes as much as several hundred miles out to sea. When that line is reached the bottom suddenly tegins to slope down toward the absenual depths.

The floor Ising landward from this line is known as the continental shelf. and it is upon this broad shelf, with egralen egall egral corn eiggeragn da as that of the Colted States, that the confidents are planted. By overflowlug this vast area of slightly submerged territory, the oceans gather unto themselves 10,000,000 square miles of territory that in elevation belongs more to the land than to the

As a matter of fact, the confinental shelf lies in part under water and in part above, the part above being the alturial plains of the continents. Where these plains are broad the shelf usually is broad, and where they are narrow the shelf is usually parrow. For instance, the plain on our Allantic coast is broad, and there is a corresponding breadth to the continental shelf. On the Pacific coast the alluvial plain is very narrow, and the 100 fathom line is correspondingly

close to shore. From a practical standpoint, the part of the sea of most immediate interest to man is that which rests upon the confinental shell. Here are allaated all the seaboard citles. Wherever the ocean lanes may meander up and down the briny deep, they begin on the continental shelf and end there. But for that shelf there would be no bays or gulfs, no harbors and no havens, for the boundaries of the true ecean basing are infinitely more regular and less indented than the sherelines. Ocean-bound commerce would be varily inconvenienced if it had to dispense with all the advaninger that the continental shelf

brings to th Sta Ford an Important Question,

A matter that seems deathed to occupy a larger place lu occanegraphic research is the question of sea food. The World war demonstrated how

### USE OF ARTIFICIAL LIGHT

HAS AFFECTED THE EYE.-In the course of generations there will be no blue-eyed people in London-their eyes will be changed to brown. That is the prophecy of Dr. William Corbett, au eminent English eye specialist. We are suffering from over-civilization, he says. "Our eyes are not constructed for modern purposes. Many more people are affected by eye strain than was the case a few years ago,

According to Doctor Corbett about 25 per cent of the pupils in elementary schools in England have defective vision. They have to wear spectacles. "Our eyes were never intended for educational purposes by unture. but solely for purposes of selfprotection," says the specialist. "The notice of North Africa has deep brown or black eyes, which enable him to stand the glare of the bright sunshine upon the sand. The northern European is equipped only with eyes of gray or blue color. His eyes are intended to receive as much fight as is available to the darker northern latitudes. He cannot

stand glare. "I hold that nature will adapt herself and produce a browncolored, protective tris in the eyes of three generations to come-descended from our modern blue-eyed parents-or we shall be more artificial than ever and wear ugly goggles with colored lenses.

### How Rembrandt, Famous

Painter, Was Named Very few of us can trace our family names back more than 250 or 300 years for the simple reason that there were no surnames except among the wenithlest and best established familles until well into the Seventeenth century.

Emil Ludwig, the noted biographer writing in Cosmopolitan, tells, for example, how Rembrandt, the Dutch

master paluter, got his name. "Ills forebears had been accustomed to a life of toll as millers. The memory of their past was transmitted by word of mouth alone. They did not even have a family name, but were known merely as the sons of their fathers. Thus Rembrandt's father was called Harmen Gerritzzoon, or Harmen son of Gerrit; but because their mill stood near the Rhine and went by the same name, he added in the official

records, 'van Rlin.' "In 17 years Harmen's wife brought into the world eight children, most of whom lived. Three sons had already learned a trade when she bore her fourth. She called him Rembrandt; and since the father had by now made n home for himself, the beginnings of n family tree were formed, a step nearer to the middle class had been taken. Thus, feeling the need to give their son a real name they called blm Rembrandt Harmenszoon van Rija."

### How Birds Travel

How birds fly is now being deter mined by French' scientists by attaching minute recording instruments to homing pigeous. Their speed variations, wing strokes and other movements are measured. Slub himself mny fly without a piotor some day. think some commentators, as a result of this study. They say man can exercise more power than should be needed for flying, if that force can be utilized as the birds use-it. Three aerodynamics experts recently gave the French Academy of Science a report on experiments with their thay Instrument. It is a mechanism 2 43 inches long, 1 1-5 inches wide and 1 1-5 inches high, and weight two ounces.

### How Epiglottis Acts

The epiciottle is a tongue-shaped cartilaginous flap situated at the anterior border of the larynx. It used to be thought that this structure acted ng a "ild" to the larynx, falling back over the laryngest aperture in order to prevent ingress of food or liquid during swallowing.

This view was shown to be erroneous by Stuart, who proved that during awallowing the epiglottis actually moves forward and does not fall back. Moreover, when the epiglottle in man is destroyed by discuss swallowing remains unaffected, and many animals not possessing it awailow perfectly.

### How Scent Kills Germs

Cars upholstery can be protected from germa by the scents of common plants such as thyme and geranium. The odor of cloves kills interobes in thirty-five minutes, while typholdfever bacteria are killed by essence of cinnamon in twelve minutes.

For nearly two years upholatery in which quantities of these plants have been mixed has remained germ proof.

How Salt Affects Ice The bureau of standards says that a solution of sait in water has a lower freezing point than pure water. When said is placed upon ice at a temperature not too far below freesing point, the ice and sait combine to form a pair solution of lower freeing point that the ice. The melting of the ice absorbs heat and this lowers the temperature.

### Light Is Moving Force of Migratory Birds

Migratory birds, says a writer in Tycos, come and go with blind punctunilty. They may be seen starting, south in the heat of the dog days, and many a first robin arrives north in a blizzard, when by stopping 100 milesfurther south he could have had warmweather.

Recent discoveries by ornithologists show that it is not the weather which starts the birds on their travels, but the shortening of the hours of day-

Birds are very sensitive to light changes. They show restlessness at the liest signs of dawn, and nest with the first coming of durkness. It is not that they go to rest after being awakejust so long, for they are easily fooled by an cellpse, and poultrymen now use artificial light to stimulate egg production.

The Arctic tern is the world's champion migrant. It nests as far north as land has been discoveredsometimes only 714 degrees from the pole. When the young are fully grown-usually about August 25-the birds leave the Arctic and a few months later are found skirting the edge of the Antarctic continent-11,-000 miles away.

This gives the Arctic tern morehours of daylight than any other antmal on the globe.

On June 21, about the time the terns arrive at the Far North nesting site, the sun has reached the tropic of Cancer and the Arctic region en-Joys 24 hours of daylight. When the sun starts its trip back toward the equator, the days begin to shorten, and soon the flight southward is in full swing.

Then, on December 21, the surreaches its southernmost point at the trople of Capricorn, and the Antarcticis illumined by the midnight sun. And shortly after the sun turns, the birds are again racing northward.

### Why Habit of Frowning

Should Be Corrected Nothing mars a good appearance more than the nervous twitchings of Me facial muscles to which so many people are subject, points out Elicen-Bourne, well-known authority on beauty subjects, in an acticle in Liberty. She gives the following directions for the correction of such unsightly habits:

"First of all," she explains, "try by n little self-munlysis to find out why you do these things. Remember thur m muscular netion is habitual until it becomes unconscious. Therefore, to cure a bad habit, one must first learn to realize every time it is demon-

strated. "In the case of a frown or a squint," mensure is to visit the oculist. Perhaps some defect of your vision makes you serew up your eyes. When that has been corrected, purchase some court plaster. With pieces of it stuck between the eyes or at their corners. you can neither draw together cour brows nor lift the cheeks in a squiat without knowing you do it. When all by sourself, put on the court plaster. Follow this by a gentle massage with cold cream, and that by an application of ice. Probably it will help tocontrol your facial muscles if you give them daily gymnastics. Also, you must learn to rest the face whenever

### Why Inns Were Made

To get the full savor of an old inn you should come to it at night. and best of all, winter night, or twilight, when the mists are rising ... and a log fire and a dinner seem to be the twin stars of buman application. All of us know those moments, and that is why line were made-to stand upon the pligrim's way with an understanding smile for the pligrim's weakness. They are a sign to us to shed austerliy and vigilance, and to meet and mingle with our fellows; to turn from our various occusions, lofty or low, and to ease our common needs and common anxteries in kindly communion,-Front the Preface of "The Book of the inn." selected and edited by Thomas Burke.

### Why Music Is Valuable

Good music is a maker of men, of menners, of minds and of homes. I have watched good music work on child life, and on grown-ups, for thirty years and I am as sure as that I am writing this that one of the greatest sources for good in our homes and in our lives is good music. Music from a radio or from a player olano or phonograph is very much better than no music, but music played or song by oneself or by someone in the home is far better. So make your home a singles, playtog home, for you will be more successful, happy and healthy if you do. -Henry Parmort Eames in Child Life Magazine.

#### Why Raven Is Black Neah was not the only mariner who

sent out ravens. Norse navigators used to carry them in cages and net them free to be followed as guides. If the birds came back, there was so land hear: If they did not return, the ship was steered the way they had gone. Iceland and Greenland are said by some to have been discovered in this way. Noah was less wise, or more timid. The raven is reported to have been pure white will he falled to return to Noxh, when "the blackness of death tone put on him."-Louise Driecoll in the Yale Review.

GORHAM, N. H.

Like Old Buccaneers Although pirates ore hardly less common than Ashermen on some Chinese rivers, they differ from the pirates of popular juvenile fiction in that they are not particularly bloodthirsty. In fact some of China's best known government officials began life ns bandits or pirates, and found it no detriment socially in after years. An incident illustrating something of the sort was told in the Dearborn Independent by William E. Barton, who has traveled extensively in the Orient. as follows:

Gift Proved of Little

Value to Lafayette

When General Lafayette visited.

America in 1821 congress, by act of

December 28, 1824, granted bim \$200,-

000 and "one complete town of land"

in recognition of his "services and

sacrifices" during the Revolution,

Pathfinder Magazine recalls. The land

was to be located under the authority

of the President "in any of the unap-

propriated lands of the United

States." This location was made in

what was then known as West Flor-

Ida and embraced 23,028.50 acres cov-

ering part or what is now the city of

was issued on July 4, 1825, and was

delivered to Lafayette in person by

the commissioner of the general land

office. A notice in the Pensacola

Gazette of 1825 says that Colonel Me-

Kee arrived in Floriga to select the

land for the famous Frenchman. La-

fayette never saw his Florida land. An :

attempt, was made to colonize this

tract by French settlers under Count

La Porte, but the scheme was unsuc-

cessful. A few years later Lafayette

made another attempt at coloniza-

tion. He sent Charles Murat, a son

of the great cavalry general and

Napoleon's sister, but he too falled.

After Lafayette's death the land was

by a large number of different per-

Industry the Keystone

A book is being talked about called "Rey Men." A good deal is said in it about industry. No man becomes a key man who is not industrious. Industry is the important word. No one can become rich and prominent without it. Are you a key man? It is a good term. A key man means one who can do something worth while a little better than the sycrage. The average man culy "gets along," The key man gets rich. Don't Imagine that you can over succeed without industry. Only leafers demand less work,-II. W. Howe's Monthly.

Didn't Lose Anything

Students of the times are quite convinced that women are rapidly grasplog the business spirit of the age as, well as the llogo of commerce. The growing business aptitude of one of the gentle sex is indicated by the following incident which is reported to have occurred very recently. A young wife, residing in Chicago, lost her husband by death and telegraphed the

tidings to her parents in Maine: "John was killed in an automobile accident this morning. Loss fully covered by Insurance."

Hard of Hearing

Arthur, Jr., age three, and his mother were in the basement of their home, mother hanging up some clothes and Junior playing with an old broom. After a while mother said: "Arthur, ton must stop sweeping; you'll get dust all over mother's clothes." He swept shead, however,

After a little time, again: "Arthur, didn't you hear what mother said?' Whereupon he replied: "Yes, mother, but I didn't hear you very good."

Keep Fire Out of Woods One of the simplest details of fire prevention lies in cleaning up the wood. lot to reduce the tre hazard, says the American Tree association. Cui out all the dead trees and the weed trees such as cherry, bornbeam and gray birch, leaving enough partially to shade the place. The waste brush should be piled and burned in a place and at a time when there is no danger

### World News Made Up

of Wheat and Chaff Do not be distressed overmuch by news of cvil. This is a wide, wide world. It contains much that is bad, but more that is good. Rightcousness is slowly, but surely, triumphing

If you do not believe that, or merely have not realized it, turn for a moment to contemplation of happier things. Turn your tired eyes from the day's record of exil to the day's golden roll of honor. There is more of good news than of had news today, every day. There is more to see on the sunny side, and it is more worth

There are only two reasons for gazing at ugly things: either that we may more fully know evil when we meet it, even in gilded robes; or that we may grapple with it and blot it

Brond highronds of honor lend to every worthy goal of life. The mud roads are in the lowlands, leading only to dissolution and corruption. If we travel the mud road it is at our own volltion. Sin is not the harvest of life. It is

the chaff threshed from the wholesome grain and will be swept from the threshing floor. Why look upon the chaff when the grain is there? It some days the volume of chaft seems greater than others, know that

the threshing has been more thorough. This is a wide, wide world, and full of exertness for those who would find It.-- Helena (Mont.) Record-Herald.

### Must Have "Purchase"

Experiments have been made in a

specially devised mak in order to test the truth of many stories told of ortopi attacking buman beings and drag-

"dummy" of the some specific gravity and, hadding onto the edge of the place with some of its arms. It dropped its prey beneath the surface and rreshed the crab shell with its nowerful laws

#### It is believed that these experiments afford proof that the octopus can drag its victims for below the surface of the water only near rocks to which it

can attach "ta "suckers." There is one spot in the Bay of Nonles where these creatures attain a targe size, and new and then a fishcrisan is reported missing.

### Cable Construction

The Western Union says that an Alinntle cable consists of a central copper wire which carries the electric current. Around this are wound flexible copper tapes, which in case of a break In the wire would carry the current around the gap. This is wrapped with a permalloy tape whose magnetic qual lifes give the cable its great speed This metallic part of the cable is first inclosed in a thick covering of guttapercha, which holds the currents to their path. Around this is a wrapping of jute, which cushions the pressure of governi miles of sen water. Eightcen steel armor wires surround the cualifon and protect the cable from injury. The whole is incased in an outer coating or wrapping of tarred

### A Point Problem

The chairman of a local council in freland was not an educated man. He was giving his account of the year's splendld work done by the council He read the report by the medical officer of health, and quoted the death rate as 120 per thousand.

"Mr. Chairman," asked one of his

chalrman, tooking severely at his questioner. "It means that out of every thousand inhabitants 12 have died Mary.A. Chase, Bethel, Maine. and 9 are at the point of death."

### Pigs in Clover

In a district near Pretoria, pigstles made of warble and buildings cemented with pure white marble are quite common. Practically every kind of marble in found in this district, which

is about forty square miles in extent. The only reason that this valuable stone is not exploited is because of the lack of transport. The rallway does not extend near the district. Stone equal to the best Parlan marhie could be quarried there if the problem of transport could be solved.

### WHY:

### Pet Dog Today "Makes" Bed Before Lying Down

Nearly everybody has observed that fussy dogs often turn several Umes batore lying down. Scientists attempt to explain this trult by the theory of erolation. They say that our domestic dogs descended from a species of wild dog or wolf. These progenitors of the dog lived in the forest and in order to iand a comfortable place to rest they had to trample down the grass and ether vegetation. A relic of this in-stract shift surrives in the dog which turns around several times before it-

It pays to advertise-Use our class-

122 by D. J. Walsh.

r N A few minutes the president's perfectly gloved hand would gently let fall the gavel. The twenty-five members of the Athens Monday Bludy club were making the most of those minutes. Dainty new spring hats bobbed this way and that, eyes widened, darkened, beamed, were mer-ry, were serious. Charming voices

"Rits Condon is back, did you know?" Mrs. Phillip Corson managed to have a good triend of hers, Myra Munro, across the half-circle of chairs

At the name, "Rite Condon," there wan a pensation of the light chattering anent golf and spring cleaning and "permanents." Everybody turned to hear Myra Munro's unswer to the question from Mrs. Corson-Illia Con-

don back, rich, widowed now a year, "Yez, I know," Myrn, nodding, answered. "I was just going to ask you about her,"

"Well, how is she?" enrocally inquired Mrs. Elmer Liddell, an intenseperson who desired to do her duty by neighbor and fellow-club member,

laundress, infrdresser—everybody.
"Really, I bayen't seen her," Mrs.
Corson answered. "I thought I'd run around tomorrow."

"Test!" went Mrs. Liddell, "It looks ns it she were going to stay to that morbid sectuation she affects, not let-Ung any of us know definitely about her return and all. Everybody has grief to bear. It's not fair to the world we live in to bille our heads and mourn forever. We have our duty to other people to consider,"

"Well, that's what I think!" exclaimed Mary Slicott, a bride of two months living next door to a devoted mother and father and possessed of all the material advantages even a modern bride could imagine desirable.

The rest smiled at her theory, "Well," Mrs. Corser remarked thoughtfully, "Ot course, litta is lost without her husband. He was the positive type, if I may be allowed to say so. Life was pretty easy for Rita with Beveridge Condon running every detail of it for her. He was certainly the ideal imaband, simply devoted to

Ulta in every way."
"Yes, no wonder," sighed the little plak bride, "no wonder she's just all broken up-losing him,"

"Hat"-Mrs. Littell spoke in her most authoritative voice-"I think Rlin should go on doing Just on Beyeridge would want her to; keep her house the beautiful thing he made tf. wear those oles, conservative clothes he liked, attend club meetings apd improvements as be always helped

They all medical line, Liddell was "I wonder where also's been all these nix mention" together a field woman. parties around from underneath Mes. Uddelia black charider.

"Will-1 tellered ventured Mrs. In New York of least part of the

"Of course" searced Mora Monra.

known that who had really been more morrow-in the country, promps, and 25. C. Mes. Emily Forbit, Erriciary, Country clab function and bridge to-CUDDENT LODGE, Se. Cl. R. et P., morrow. Couldn't you go with me,

"I can't, sold Mrs. Lillich corpat-ically. "I bore on interview with the major for toxing on that new capfew plan. It's these something was being done to curb the lawless rising

Some of the other women no.13c) vigorous assent, others looked thoughtful, even trackled. But, the gavel falling at this tenment, no one cared to express herself concerning the un-

curied rising generation, a sere point. on Tuesday. On the wide porch they talked after lunch while the committee prepared for the bridge playing. Myra Muuro, spinster of torsus, and Kralias Corsen, wife of Philly Corsen, chief lawyer of Albent, were the center of an animaled brightly garbed

"You say she's awfully different?"

"Oh, Jes!" surveyed Mrs. Corsen. "We really hardly know ber." Space was made at the juncture for the impealog both of Mrs. Idddell in

black ally, "the Mrs. Libbell," explained a arw buadeud seedee namew zoonz ness to important department head in the Liddell Mericage company, "ikey say Mrs. Bararidga Condon is at house! And sho's changed so!"

"How" the asked sectionly.
"Well," hesitated thralles Corson,

"the last seems lighter—"
"If m," expect from Mrs. Liskbell's

"I dea'l mean light in a reprehensicare," resiliented Mix. Consess.

"The seems easier, not so much on a Radium in Quantities strain, watching every word-you know-"

"Oh, she is dear!" bisbbed Myra Munro. "I can burdly walt till you know all about her!"

"Well, she ought by all means to keep up her club work and her social obligations," pronounced Mrs. Liddell. "Why didn't she come here today?" Of course several others nodded approval of Mrs. Liddell's sentiments.

"Well, she didn't seem to have time." "What was she doing?"

"Well-really!" "Yes," continued Mrs. Corson with sparkling eyes. "She was digging in her garden and her half was like a boy's and she had on pantal Now-Myra-you can tell about-you know what P

"Digging."

"Ob, those adorable children!" nimost shouted Myra. "Four of them. One is a little girl that Doctor Forest told me over the phone just before I came here, had been terribly abused by somebody who had adopted her be-

"O-o-obl" came in a thrilled pitying "She was the only really pretty one in the lot," Evaline Corson Interpo-

lated. "Yes, really, that's so," affirmed Miss Munro. "The others were just common children, you know, another girl about thirteen-and two boys of ten- and then this little curly-headed beauty of Are."

"What was she doing with all those children?" "We told you she was digging in

the garden with them." "But she's not adopting them

"She surely is! And she is giving the house over to them and she's going to supervise their education closely, study with them, all that, you know. She's got part of the lawn done into a tennis court and she's planning a lot of other changes."

"And Beverldge always said she wasn't strong enough to take care of a family! He wanted her to give up all notion of having even one child. He sald she was to take her place in the social scheme as a cilizea, as a woman of leisure and wealth should-"

"Well," and Myra Munro, spinster, tossed her head, "I think she's a useful citizen if I ever saw one." "I am not at all sure that she will make a wise mother," spoke Mrs. Elddell very, very earnestly. "She will be for from strict."

"I shouldn't wonder," sald the bride of two months to Mrs. Corson, her erea twinkling and her checks affush. "I shouldn't wonder it Mrs. Condon didn't know pretty much what she's about. We'd not need to be 'firm' with the rising generation if we saw to it that every child had a happy childbood. It I ever need advice as to how to raise a family I think I'll go to Mrs. Condon-and Misa Muaro!"

### Extended Search for

Materials for Violins

That ilmited output and variety of product command more than prodemic interest in this oge of quantily production and standardization is rerealed in the present enterprise of Meholas Vasieli of Scattle.

Commissioned by Mischa Elman to create four instruments for blm, this young violin maker directed his ecarch for woods to European cathedrals. In this quest there was an uncolsinhable enver of romances

The specifications require the posts. "the finest that money can hav." In the very one of come of the great church structures le flie proudes et a successful quest. For it is well known addresses testantes to chara test have a remanance separter to those out from previous growth, no matter what

turir proin or films. It is not tard to tableso that long association with these ancient woods with the figh and extense of the race have made them the communicative

repositories of human feeling. But it remains for the beer of the master to give back those but ecstatics to the world. For nehierement of that objective, Mr. Vasich is on important intermediars.

No Season for Painting

Although spring and fall are the favorito vezzona for outside painting. It is not necessary to put it on if the need for it becomes apparent in the summer or winter. Outside painting can be done whenever the auclaces are dry and the weather is not damp. frosty, or freezing. Best results are obtained when the temperature is between OD degrees and SD degrees Pakerenheit, Paloting can be done in beated buildings at any time. Cool, dry weather is best for calcimining,

Would Change Nature The Biblion proplet spoke of the wilderness and the desert place "blossoming as the rose," and the aggleut-turist, by means of irrigation, has succeeded, within limits, in fulfilling the seer's words. But the dream of making the poles of the earth habit-

able and fruitful scows a vala one. Yet a way has been suggested. It is not impossible, but highly improbable. It ever a method should be discovered of manufacturing radium, or if a method should be found of extracting radium from natural materials in great bulk, even the problem of fertilizing the poles, by making them temperate in climate, might dad a solution. So great is the heat produced by

radium in proportion to its bulk that a quantity easily transported by manual labor would be sufficient to change the temperature of the polar regions. Indeed, it enough were taken there it would produce tropical conditions. At present there is not a pound of radium collected in the whole world.

and it is the most costly thing known, But the time may come when we shall be able to make radium from chem-Ical elements in bulk, and then many things how regarded as impossible will be easy.

### Found "Boss" of Home Busy Washing Dishes

A local man who frequently boasts of being "the boss around his shanty" is busy trying to make a certain group of women desist from spread-ing the tale of how he was "bossing" the day that they called on his wife. On the day in question a group of

about seven clubwomen decided to call on his "better half" to induce her to join a club which was in the process of formation. They went with some misgivings because the "lord and masfer of the establishment" had frequently stated that he was not in harmony with clubwomen and that his wife would not join such silly affairs as long as he "was boss."

As the group entered they found his wife smoking a cigaret and reading a novel. In the kitchenette they heard n clutter of dishes and as conversation became difficult with the din that came from the crockery, the wife shouted: "Oh, John, do be less noisy when you wash the dishes."-Springfield Union.

### Didn't Like the Color

"I can let you have 'twos,' lady, no more one cent stamps," said the man behind the window.

"No," replied the dreamy eyed girl, "they won't do," and she stopped eaw oily namey oil wolln of oblan next in line to make her purchases. She was still standing there as the woman stopped a moment to put her supply of stamps in her ourse.

"I Just can't make myself use twocent stamps," confided the girl: "they're such a dreadful color they positively make me sliudder and they won't go with any kind of letter paper. I suppose I'll have to go up to the next post office, but it's better than using plut stamps."-New York

Famous Scholar Gregor Mendel, who gave to selence the laws of heredity that have made his name immortal, was a monk in the mounstery of Konlgen-kloster, in Brunn, Austria. He bezan his work as a teacher in the technical school nt Brunn and continued his sindles at the University of Victoria. The monestery garden was his inforatory. where he electrical the cycles of reproduction in plants. In 1915 he announced his discoveries before the Natural Illatory society of Brunns but received to recognition, in all, be

### STANDARD OIL COMPANY OF NEW YORK

### "good morning, motor"

OOD morning, Boss, Say, could you spare I me for an hour down at the garage? I don't feel just right. Shouldn't wonder If the gear shift or diffy needed some grease. Or maybe the clutch is slipping. Those birds never have much to say for themselves, but they do a lot of work and get awful mean when they don't feel right. When you have two pieces of steel working together, they are like a couple of strange bull terriers if you don't feed them plenty of oil and grease."

### n e ra PLEASURE MOTORING FOR A FEW CENTS MORE A GALLON

WATCH those cars that draw up beside the Socony Special pump new cars with high compression motors and veterans still going strong despite their carbonized cylinders.

Their owners are paying more a gallon -for what?

Not for transportation exactly. They could save the few cents, get Socony Gasoline, be absolutely protected against fuel troubles, and match mileage and upkeep records with anybody. No, the owners of these cars are looking for something different, and getting it. They are getting a perceptible improvement in the pick-up of the motor in traffic, a little more silk in the sound of its purr, a little more power on the steep hills; and a gratifying absence of knocking.

They're getting, in brief, a new and exciting pleasure in motoring, worth far more than the few extra cents they pay. Like Socony Gasoline and Socony Motor Oil, Socony Special is tested thirteen times before it reaches your car.

Let your motor be the judge

dropped it again quickly as he saw the cradle. the red, puckered face on the pillow. "The wee ones left it," the maid, who had not seen the contents, explained.

Bayliss laughed. "The Chaff twins! They have kidnaped the new baby!" The maid took the now crying baby into her arms and soothed it. "It's rather red," the young man

said, looking down at the tiny mite. "It's going to be a pretty baby," the "I hope so-if I have to raise it." The girl uncovered its little feet and

kissed them. "I love it," she said softly. "I'll give it to you," Bayliss laughed. She sat down in a hig chair and lingged the buby close to her, "We do

not care whether he likes us or not, do we, baby dear?". The man watched her with an expression of deep content as she rocked the tiny thing to sleep. He was plannlog a future with just such a picture In it. She, too, was dreaming. He touched her hand softly and she

looked up to find his eyes compelling lier. "I love you," he said. "I just love you!" and he gathered them both in

his prins. "Don't hurt the baby," she said

"Is that all you have to say to me?" She raised her eyes and he read his iltle clear to the future he had

In the meantime the baby had been missed and the Chaff family were nearly wild, for they had been unable to find a single clew to bis disappearance. It was Ned who finally sug-Mayme protested. "We'll give him the | gested that the twins might have kidnaped the baby.

"They was mighty cut up about the

comin' of that baby," he said. The twins were at once pulled out of bed and questioned. Mayme rubbed her eyes and went to sleep again, but Peter put his hand over his mouth and could not be persuaded to speak. Again Mrs. Chaff shook the little girl to awaken her and asked what they had done with the baby,

"The stork-made-"What did the stork do?" mother

"Made a mistake, Mrs. Bayilss,-" Just then the phone rang and Mrs.

Chaff ran to answer IL "We have your baby, Mrs. Chan," a soft voice said. "The darling is all right and sound asleep. Shall I send Mr. Ingliss over with bim?"

"I will be over at once," the mother answered, basilly hanging up the

Poor l'eter pulled the quilt over his bend. "It is no use," he said hopelessly, "It's no use. Nobody wants blin "What can I do for the two wee but mother. We'll have to keep him and watch that stork. It's just mean enough to leave two next time,"

Mrs. Chair hugged ber baby while she listened to the story of his abduction by the twins. "They were teased about his coming," she said thoughtfully. "It is very unwise to lease children about things which may touch them more deeply then we know. I mean to be especially tender to my Jealous little ones."

"I'll help solve the problem by kees-

"Oh," sighed Peter. "He is back ngain i"

"There were two of you to be fed. bathed and dressed, but I didn't mind, because I loved you," she said, "When little brother is larger I'll let you wheel him in the cart. He will soon be big enough to play with you and

you'll have pice times together." The twins were comforted. Peter examined Mayme's nose, then felt his own. "They were not out of Joint," he explained to his sister, "and mother before he came."

"I think he is going to be a very nice little brother," Mayme said, touching a tiny hand. "Mother says be looks like me." "I am going to watch the stork," Peter said, still somewhat stubborn,

Roman Smiths Expert

"He's left enough at this house."

in Handling of Iron Roman artisans in England only two or three centuries after the time of Christ knew how to weld fron and how to Join or "solder" two pieces of Iron together with copper, the institute of Metals was told at its meeting in London by Profs. J. Newton Friend and W. E. Thorneycroft of the Technical college, Birmingham. The specimen examined by them was a deep from ferrule, like a modern napkin ring, that was unearthed during exeavations of the Roman city of Uriconium. located on the lilver Severn and de-

stroyed about 350 A. D. Lead pipe manufactured and laid to Rome's water system 1.500 years ago was pronounced to be in perfect condition by William A. Cowan, chemist of the National Lead company, Brooklyn, in a communication to the institute. Analysis showed that the same lead was used by the Homans in England and Italy.

Welcome Visitor

"Good morning, madam," said the caller, removing his hat. "I represent a laundry association. May I explain our service?

"Certainly." replied the young woman: "come right in. I'm one of your customers. I wish you would explain it."

Why Leisure is Important Normal Americans need nothing more than lelsure-intelligently occu pled. Leisure should not mean idleness. Mere illieness deteriorates the body and mind. Leisure is time set apart from hard and fast routine John to be occupied by attention to those more important matters that put sole stance in the prind and Unish on the personality. The age of machinery is bringing more leisure. Our problem is to learn how to keep it from degenerating into more idleners.-- Grove Patterson, in the Mobile Register.

Why Gas Masks Are Vital Gas masks are worn by horses. mules and men in the Crane-Upton oil fields, near McCamey, Texas. All drilling crews, pipeline workers, truck drivers and even visitors to the field must be constantly equipped with gas masks to prevent being overcome by the fumes of hydrogen sulphine gas which emanates from the wells. This gas is almost edocless and for this reason it is a greater menace to all kinds of animal life than it otherwise

### How Ravages of Rust

Are Being Lessened . Damege caused by rust affects every department of life, including the home, but it is most serious in industry, even though It has been found possible with the nid of science to retrieve a good deal of the fron last

na scrao. Methods of protection of exposed purfaces, particularly steel, against corrogion are among the most remarkable of recent developments in sci-

Ten years ago the annual wastage of fron and steel had reached 30,000, 000 tons, as against a mean world production rate of 50,000,000 tons. This annual wastage is rising steadlly all the time. Dut the enormous intensification of the research into the cause of corresion and the possibilities of protection against it has had results that are extremely promising.

How Indians Reckoned Time Most of the Indians north of Mexico did not reckon timo in years in the pre-Columbian period. They recognized the passing of the seasons for the current year, but the period of the moon was the unit of all permanent records of time. They started with the new moon. Among those tribes that counted by years and moons both little attempt was made to correlate the moons and years exactly. Some tribes regarded 12 moons as a year, and others 13. A few tribes added an extra moon every so often. say every 30 moons, in an effort to make the moons correspond with the solar year.—Pathauder Magazine.

Why Lyric Was Rejected

An Australian poetess has decided that It is a tough trick to write for a practical minded government. A school teacher, she wrote some verses about various native birds and forwarded them to the education department in the hope that they would be included in some of the elementary school readers. One of her characters. a crow, was made to say, "I'lls famb looks weak, I'll what my beak," After three months' walt this particular lyric came back with the following official notation: "Statement regarding crows not approved. Suggest lines be altered to show value of crow as check to blown's peats."

Why Known as "India Ink" "India lok" is called by that name beenuse it was originally black pigment composed of a mixture of lamp black or burnt cork with gelatin and water, scenied with Horneo camphor and musk, made in India, Chica and Japan. It was sold in sticks.

Why Many Won't Sell Dog The prejudice against selling a dog la based on the old Hehrale Scripfural teaching. Deuteronomy, chapter 23, verse 18, forbids the bringing of the price of a dog into the house of the Lord for a vow. It is branded as an altermination unto God.

Why Widows Wear "Weeds" Widow's "needs" are derived from the Saxon word "waede"-a woven garineol. Later the term was conthed to the distinctive dress of a widow, and then narrowed to the long crape streamers from the box-

## SERVICE

### 5 years of service is only a starting point for Buick

-Skilled engineering and rugged construction make it the most durable of motor cars!

Keep in mind, when buying your newcar, that more than three-quarters of all Buicks produced in the last twenty. five years are still serving their owners.

Buick endures-Buick stays young-Buick stands up and gives its best over a longer period than any other carbecause it is endowed with an extra-rugged double-drop frame-Buick's world-famous Sealed Chassis and Triple-Sealed Engine-and the most nearly perfect oiling system ever developed.

You'll prefer Buick because it leads in beauty and luxury: and you'll prefer it, too, because it is the most durable of cars-and therefore the most paying investment.

All fluick models have Lovelay Hydrable shock absorbers, front and rear, at standard equipment
